

MEMORANDUM

TO: VP of Sales & VP of Operations

FROM: Alexandros Miteloudis, Data & Business Analyst

DATE: September 8, 2026

SUBJECT: Q3 Order-to-Cash Cycle Analysis & Revenue Optimization
Recommendations

Executive Summary

Following a comprehensive review of our CRM and ERP data for the past 12 months, I have analyzed our Order-to-Cash (O2C) lifecycle. While our overall lead conversion remains stable at ~40%, the analysis reveals significant opportunities to optimize sales routing and accelerate cash flow, potentially unlocking trapped working capital in our Tech and Healthcare sectors.

Key Findings

1. **Misaligned Lead Routing:** Our top revenue generator (Lisa C.) has a 36% win rate but an average deal size 30% higher than the team average. Conversely, our highest win-rate reps (Anita R. at 52%) are closing smaller deals. We are currently routing leads randomly rather than by deal complexity.
2. **Accounts Receivable Concentration:** While no invoices are currently past due, we have over \$60,000 in outstanding receivables concentrated in the Tech and Healthcare industries. Waiting for the "Net 30" deadline is causing unnecessary cash flow drag.

Actionable Recommendations

1. **Implement Tiered Lead Routing (Sales):** Immediately update CRM routing rules to direct high-value enterprise opportunities to our "Enterprise Closers" and high-volume SMB leads to our "Volume Closers."
2. **Proactive Dunning Process (Finance):** Implement an automated email reminder sequence triggered 5 days before the due date for all Tech and Healthcare invoices to reduce Days Sales Outstanding (DSO).
3. **Website UX Optimization (Marketing):** Website leads close 1 day faster than other channels. Marketing should audit the website checkout/demo request flow to reduce friction and accelerate this timeline further.

I have attached the underlying SQL methodology for your review. I am available to discuss these recommendations in our next leadership sync.
